

- Fix any leaks: A small leak can waste hundreds of gallons of water over time, so be sure to fix any leaks as soon as you notice them.
- Turn off the tap: Be mindful of how much water you use when brushing your teeth or washing dishes. Turn off the tap when you are not actively using the water.
- Use a bucket: When washing your car or watering your garden, use a bucket instead of a hose. This can save a significant amount of water.
- Use water-efficient appliances: When it's time to replace appliances like your washing machine or dishwasher, look for models that are designed to be water-efficient.
- Water your lawn wisely: If you have a lawn, be sure to water it during the early morning or late evening when the sun is not as strong. This will help to prevent evaporation and ensure that your lawn gets the most out of the water you use.
